

How 2 Scada Smart Lighting

Version 1 - 07/2022

Table of contents

Introduction	
1	Device groups
2	Group lock
Special Features	
1	Motion detector
2	Controller
3	Smart dimmer

Introduction

1 - Device groups

Using groups you can connect multiple devices together.

To connect two devices you have to give them the same group number.

To do this you have to enter the number in the “group” value.

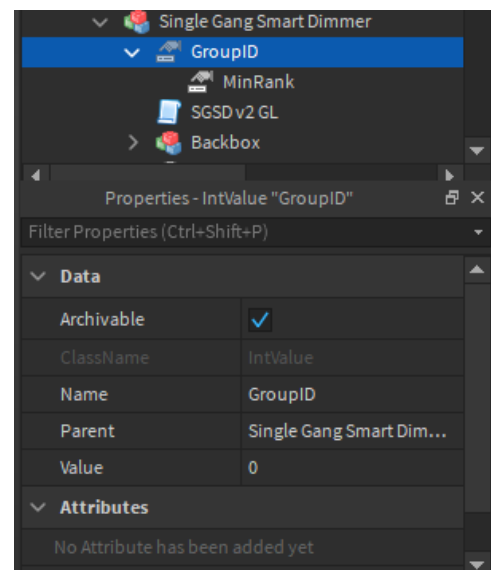

2 - Group lock

You can lock devices to only be used by group members.

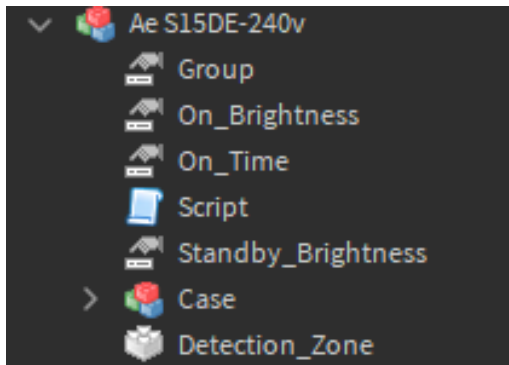

You enter your group’s ID into the “GroupId” value.

And enter the minimum rank number into the “MinRank” value.

To disable this feature set the “GroupId” to 0.

Special Features

1 - Motion detector

On_Brightness : Lights brightness when motion is detected

On_Time : Time lights stay on after motion is detected.

Standby_Brightness : Light brightness when there's no motion

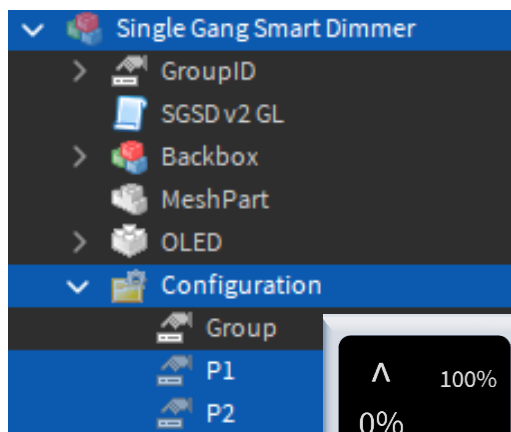

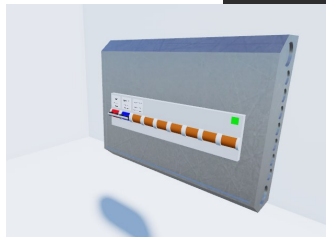

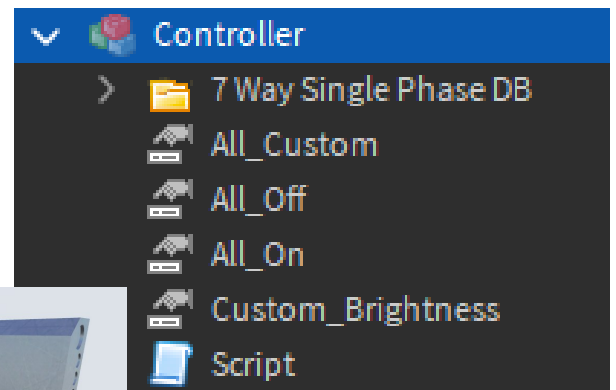

Detection_Zone : Zone where players are detected, can be moved and expanded.

2 - Controller

With the controller you can use you own scripts to controll the lights.

You can, turn all the lights On, Off and change the brightnes by

Simply changing the vallues in the controller.

3 - Smart dimmer

Using the smart dimmer you can easily dim to previously chosen values with just one click.

Simply enter the values you want in "P1" & "P2" and they will autmotically show up in game.
